

More versatile than wood for all of your craft projects.

Evolve® Lumber is derived from post-consumer polyethylene bottle wastes such as milk containers. This material is cleaned in a decontamination process to a purity level of over 99% HDPE. It is then compounded into rigid board stock material, the resulting finished product containing over 90% recycled post-consumer waste by weight. Because Evolve® Lumber is a recycled product, there can be slight variations in color.

Note: Non-standard colors or standard colors purchased in non-standard profiles may be subject to minimum orders or extra charges.

Colors requiring a non-stock colorant charge, quoted on a per-order basis.
